Industrial warning marking

Industrial warning marking Oralite 5831IND - 100 mm - Application package 2x 25 m

Characteristics

Description

Industrial warning marking Oralite 5831 IND - 100 mm width

ORALITE® 5831 High Intensity Construction Grade reflective films have been specially developed for the production of traffic signs, traffic control devices, construction site and information signs, and warning markings intended for medium-term outdoor use. Due to their pressure-sensitive adhesive, the films are intended for bonding to polyolefin substrates. The ORALITE® 5831 High Intensity Construction Grade series is available in rolls with the required imprint for construction site beacons. In addition, the special structure of the cells allows the manufacturer of the reflective film to be identified. When using ORALITE® 5831 High Intensity Construction Grade reflective films, the relevant national regulations must be observed!

An application package consists of right- and left-facing markings in the specified roll length! Width: 100 mm Roll length: 25 m Colours: white/red Shelf life: 5 years
